Running the Application on http://localhost:3000/

1) Open the terminal and cd to the a4p2 directory and run "npm install" to install all the modules from the package.json
2) Now run "node index.js" in the terminal and in the browser type http://localhost:3000/
3) The Database is already populated with data [Users and Events]
4) This will take you to the index.html page. You can either click on register to make a new account or login via Facebook.
5) Once you are logged in, as a user you will be directed to your profile home page.
6) Many of the features are similar to popular social networks across the world.
7) Users can add edit their information, add a friend, message other users, create events, Join events and chat in the event group chat, search users and events.
8) Detailed screenshots and explanation of each feature is explained in the report.pdf

Using the Admin Panel

1) Run "node index.js" and in the browser type http://localhost:3000/admin
2) The username is: jimwong and the password is: 12345678
3) You can now see the populated database (all the users and events) and the statistics

Side-Note For the Rating and Commenting:

Rating and commenting will only become available/visible once the event has passed the endtime [which was specificed upon creation]. It will be located in the events tab, inside the specific event, and below the event group chat. It will also only be seen by users who are in the same event.
